                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     뭥
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of BASB110 protein from Moraxella CC catarrhalis strain Mc2931 (ATCC 43617), a causative agent of otitis cm edia in children and pneumonia in adults. The sequence is a CC media in children and pneumonia in adults. The sequence is a CC differs by 1 residue from the predicted polypeptide sequence (see AAB20107) of a BASB110 PCR product, having Ser rather than Gly at CC position 104. The invention provides BASB110 polypeptides, and CC polynucleotides encoding them, as well as expression vectors, host CC eals and methods for producing BASB110 polypeptides, and CC comprising a BASB110 polypeptide, an immunogenic fragment of a CC comprising a BASB110 polypeptide, an immunogenic fragment of a CC comprising a BASB110 polypeptide. A claimed method of diagnosing a CC encoding such a polypeptide. A claimed method of diagnosing a CC manibody. A claimed therapeutic composition useful in treating to Maraxella infection involves identifying a BASB110 polypeptide or CC antibody. A claimed therapeutic composition useful in treating to C directed against a BASB110 polypeptide. BASB110 polypeptides also CC water that it is a BASB110 polypeptide. BASB110 polypeptides also CC antibody. A claimed therapeutic composition useful in treating to C antibody. A claimed therapeutic composition useful in treating CC cantibody. A claimed therapeutic composition useful in treating composition useful in treating to C antiboty in raising specific antibodies, and in screening for C antibacterial drugs.

                                                                                                                                                                                                                                                                                                                                                                               CC catarrhalis strain MC2931 (ATCC 43617), a causative agent of otitis comedia in children and pneumonia in adults. The sequence is a crain MC2931 (ATCC 43617), a causative agent of otitis cranslation of a BASB110 PCR product (see AAR30047). It differs by classified from the predicted polypeptide sequence (see AAB20166) of the BASB110 gene product, having Gly rather than Ser at position composition provides BASB110 polypeptides, and composition provides BASB110 polypeptides using recombinant methods for producing BASB110 polypeptides using recombinant methods. Also claimed is a vaccine composition comprising a BASB110 polypeptide, an immunogenic fragment of a BASB110 polypeptide, or a polypeptide having at least 85% amino caid sequence identity to BASB110, or comprising a polynucleotide encoding such a polypeptide. A claimed method of diagnosing a comprased infection involves identifying a BASB110 polypeptide or antibody. A claimed therapeutic composition useful in treating humans with M. catarrhalis infection comprises at least 1 antibody cdirected against a BASB110 polypeptide. BASB110 polypeptides also chave utility in raising specific antibodies, and in screening for antibacterial drugs.

                                                                                                                   capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB72072)

                                                                                                                                                                                                                                                                                                                 The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nakagawa

Host cells transformed with an expression comprising the HTLAR33 nucleic acid are used for the recombinant cC production of the protein. HTLAR33 polypeptides and polypeptides are cC useful for are useful for diagnosing susceptibility to diseases and for cC enhance (agonist) or block (antagonist). HTLAR33 activity. Diseases are CC diagnosed, prevented or treated include: bone loss and inflammatory cC (ARDS), Rheumatoid arthritis, osteoarthritis, Inflammatory Bowel Disease (IBD), psoriasis, dermatitis, asthma, allergies; bacterial, fungal, cC (IBD), psoriasis, dermatitis, asthma, allergies; bacterial, fungal, cC septic shock, pain; injury, cancers, anorexia, bullimia, Parkinson's CC disease, cardiovascular disease including restencies; atherosclerosis, cute heart failure, myocardial infarction; hypotension; hypertension; cC urinary retention, angina pectoris; ulcers; benign prostatic hypertension; cC depression, anxiety; delirium, dementa, severe mental retardation and cd dyskinesias, such as Huntington's disease or Gilles de la Tourette's syndrome. HTLAR33 301/Popticles are also useful for mapping genes to cc analysis.
                                                                                                                                                                                                                                                                                                                                                                     Query Match

The helper DNA sequence encodes a ecotropic Moloney murine leukaemia virus (MMLV) or gibbon ape leukaemia virus (GALV) gag and pol; and a xenotropic, amphotropic, ecotropic or polytropic envelope protein. The packaging plasmids, designated KAT plasmids, are used with a second retroviral vector encoding a foreign gene of interest to produce mammalian cells with retroviral supernatants that express, e.g. a hormone, lymphokine, growth factor or coagulation factor. The plasmids are useful in construction of stable cell lines that constitutively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   produce the retroviral proteins required in trans for the production of retrovirus particles: gag, pol and env. The stable producer cells continue to produce high titre retrovirus indefinitely in the absence of drug selection due to the stable integration of both packaging function and virus vector. The retroviral vector plasmids are constructed with sequences enabling the episomal persistence without the need for stable integration of the vector plasmid. The Env gene determines the host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This linker peptide is used to construct a plasmid pIK98.6-K/L/H which is used in the construction of a retroviral packaging plasmid used for the production of high titres of recombinant retrovirus in human cells. The retroviral packaging plasmid comprises a retroviral halper DNA sequence derived from a replication incompetent retroviral genome that encodes, the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo

                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to treating viral or malignant diseases using modified T cells that express proteins comprising (in an N-terminal to C-terminal direction) single chain antibody binding domains (that bind to viral or tumour antigens), transmembrane domains and cytoplasmic signal transducing domains. When the single chain antibody domain binds to the viral or tumour antigen on the cell, the modified T cells kill cells expressing the antigens. The modified T cells are used for treating immunodeficiency virus (HIV), cytomegalovirus, hepatitis C, hepatitis B, and mycobacterium avium. The present sequence is peptide linker used to link together the functional peptides of the chimaeric antibody molecule
                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Virucidal; cytostatic; peptide linker; anti-HIV; human immunodeficiency virus infection; viral disease; malignant disease; T cell; single chain antibody; cytomegalovirus; hepatitis C; hepatitis B;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to nucleic acid molecules designated monogenic audiogenic seizure-susceptible-1 (mass1) genes. The nucleic acid molecule may be used via recombinant DNA methodologies in the production of transgenic animal (especially mouse) models for studying genetic abnormalities related to mass1 which result in seizure susceptible phenotypes (mass1 is audiogenic seizures). The present sequence is mouse monogenic audiogenic seizure-susceptible (mass1) protein conserved amino acid repeat motif.

Note: The present sequence (SEQ ID NO.16) is incorrectly referred to as SEQ ID NO.15 in the sequence listing of the specification.

XX Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, preventing and treating cardiovascular disease, neurodegenerative, preventing and treating cardiovascular disease, neurodegenerative, preventing and treating trame, Doglish.

CC Disclosure, SEQ ID 8156; 1037pp; English.

CC The present invention describes substantially purified human proteins of the specification). ABN15762 to ABN7782 encode the human DRFX corrections of the specification of the specification. ABN15762 to ABN77852 encode the human DRFX corrections of the specification of the specification of the specification of the specification of the specification of the specification of the specification of the specification of the specification of the specification of the specification of cardiovascular discorders of the section of the specification, cardiovascular discorders, discorders has no the used in the transplantation, cardiovascular discorders, discorders has not settled to organ transplantation, cardiovascular discorders, discorders infectious of the specification of the specification, hypothyroidism cholesterol ester storage disease, autoimmune discorders such as multiple sclerosis, rheumatoid disease, autoimmune thyroiditis, myasthenia gravis, graft-versus-host of disease and autoimmune inflammatory eye disease. ORFX proteins are also cardiovascular diseases, discorders, proteins are also cardiovascular discorders for treating osteoporosis, competition or regeneration and treatment of lung or liver fibrosis, reperituion injury in various tissues and conditions resulting from the specification, but was obtained in electronic format directly from WIPO cardiovascular discorders of the printed specification, but was obtained in electronic format directly from WIPO cardiovascular discorders.

So Sequence 54 AA;

(1) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) polynucleotides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (1) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAKS4592 to AAKS4503 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; secreted protein; fusion protein; gene therapy; protein therapy; diagnosis; tissue; cancer; tumour; neurodegenerative disorder; leukaemia; developmental abnormality; foetal deficiency; blood; allergy; renal; immune system; asthma; lymphocytic disease; brain; hepatic; lymphoma; inflammation; ischaemic shock; Alzheimer's disease; restencesis; AIDS; cognitive disorder; schizophrenia; prostate; obesity; osteoclast; thymus; osteoporosis; arthritis; testis; lung; thyroiditis; thyroid; digestion; endocrine; metabolism; regulation; malabsorption; gastritis; neoplasm.

The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAZ24802) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 95 movel genes and their fragments (nucleic acid sequences: AAZ24801-Z24907); amino acid sequences AAY41308-Y41404) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polymucleotides in a sample or by determining the presence of mutations in the new polymucleotides. Specific uses are described for each of the 95 polymucleotides, based on which tissues they are most highly expressed in (see AAZ24811 for described uses).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 199

polypeptides. The proteins and

Example

1; SEQ ID No 22782; 1069pp; English.

AAU39105-AAU68017 represent Propionibacterium acnes

their associated DNA sequences

immunogenic are used in

CC the treatment, prevention and diagnosts of medical conditions caused by CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne, cC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. CC P. acnes is also involved in infections of bone, joints and the central CC nervous system, however it is particularly involved in the inflammatory CC lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a cCC sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The cCC polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to covaregulate expression and activity of P. acnes polypeptides and ct therefore treat P. acnes infections. The antibodies may also be used as CC diagnostic agents for determining P. acnes presence, for example, by cnryme linked immunosorbent assay (ELISA).

CC Note: The sequence data for this patent did not form part of the printed as pecification, but was obtained in electronic format directly from WIPO care fern wino introduced and consense.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention

The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB5300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent w0200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is the leafy cotyledon 1 transcriptional activator, LEC1 consensus sequence from Arabidopsis. This sequence is a HAP3-type CCANT-box binding protein, LEC1 expression initiates the formation of rembryo-like structures and improves growth and recovery of transformants When appmixis occurs, i.e. the replacement of sexual reproduction by asexual reproduction, LEC1 expression in the muclellus integument, or cell specific expression in the megaspore mother cell would trigger embryo formation from maternal tissues only. This results in the production of seeds identical to the parent. Using LEC1, transgenic high yielding seeds could be developed. In addition, LEC1 could be used for positive selection of a transformed cell (transgenic plant), for increasing transformation efficiency and for increasing recovery of regenerated plants. The present sequence was used in the identification of the plant LEC1 consensus sequence (AAY96223).
                                                                                                                                                                                                                                                                             Claim 6; SEQ ID No 2144; 2504pp; French.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLI

The present invention describes substantially purified human proteins CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 CC in the specification). ABN15762 to ABN27252 encode the human ORFX CC proteins given in ABP00010 to ABN1500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated CC disorder in humans, and in the manufacture of a medicament for treating a CC syndrome associated with ORFX-associated disorder. ORFX polynucleotide CC sequences can be used in gene therapy. ORFX sequences can be used in the CC treatment of cancer, hyperproliferative disorders, cirrhosis of liver, CC psoriasis, benign tumours, keloid, degenerative disorders related to organ CC transplantation, cardiovascular diseases, diabetes mellitus, systemic CC troage disease, various immune deficiencies and disorders, infectious CC diseases, autoimmune disorders such as multiple sclerosis, rheumatoid CC arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host CC disease and autoimmune thyroiditis, myasthenia gravis, graft-versus-host CC disease and autoimmune thyroiditis, myasthenia gravis, graft-versus-host CC disease and autoimmune thyroiditis, myasthenia gravis, graft-versus-host CC disease and autoimmune thyroiditis, myasthenia gravis, graft-versus-host CC disease and autoimmune thyroiditis, myasthenia gravis, graft-versus-host CC protection or regeneration and treatment of lung or liver fibrosis, CC protection or regeneration and treatment of lung or liver fibrosis, CC protection or regeneration and treatment of lung or liver fibrosis, CC protections of the printed constraint did not form part of the printed CC Albanese and conditions resulting from CC systemic Cytokine damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and autoimmune disorders
                                      N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; SEQ ID 1822; 1037pp; English.

                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                          8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describes and and contract describe

ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WI at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

                                                                                                                                                                                                                                                                                         The invention relates to human polymucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or activity in the diagnosis and/or activity and may be useful in the diagnosis and/or activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the encoded proteins (AAOOOO10-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or activity in the diagnosis and/or activity and may be useful in the diagnosis and/or activity and may be useful in the diagnosis and/or activity and may be useful in the diagnosis and/or activity and may be useful in the diagnosis and/or activity and may be useful in the diagnosis and/or activity and may be useful in the diagnosis and/or activity and may be useful in the diagnosis and/or activity and may be useful in the diagnosis and/or activity and may be useful in the diagnosis and/or activity and activity and may be useful in the diagnosis and/or activity and activity and may be useful in the diagnosis and/or activity and activity and activity and activity and activity and activity and activity and activity and activity and activity and activity and activity and activity and activity activity and activity and activity and activity and activity and activity and activity activity and activity and activity activity activity and activity activity activity activity and activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity activity act
                                                                                                                                                                                        26-OCT-2000;
                                                                                                                                                                                                                                                                                                                                              WO200130806-A1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is Staphylococcus aureus WCH 29 strain biofilm CC protein, biofilm A. The biofilm polypeptides are useful for the CC diagnosis and treatment of bacterial infections specifically caused by Staphylococcus, especially associated with formation of biofilm in a CC wound or on an (in-dwelling) medical device. The polypeptide is used in the treatment of diseases such as invasive and toxigenic diseases in the treatment of cliseases such as invasive and toxigenic diseases of the treatment of grant of the polypeptide is used in the treatment of grant of the polypeptide is used in the treatment of grant of the polypeptide is used in the treatment of grant of the polypeptide is used in the treatment of grant of the polypeptide is used in the treatment of grant of the polypeptide is used in the treatment of grant of the polypeptide is used in the treatment of grant of the polypeptide is used in the treatment of clistases caused by the action of exotoxins, including food poisoning, completely actions of upper respiratory tract (othis) lower respiratory (empyema, lung abscess), cardiac (infective endocarditis), constructivis, grant polyperity and conjunctivitis, conjunctivitis, conjunctivitis, confidences, kidney and uninary tract (epididymitis, intrarenal and orbital callulitis, cuttaneous abscess, toxic shock syndrome), skin (impetigo, bacterial conjunctivis) bone and joint (septic arthritis, osteomyelitis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

EX Propionibacterium acnes polypeptides and nucleic acids useful for PT Propionibacterium acnes polypeptides and nucleic acids useful for PT vaccinating against and diagnosing infections, especially useful for PT vaccinating against and diagnosing infections, especially useful for PT vaccinating against and diagnosing infections, especially useful for PT vaccinating acne vulgaris -

EXX Example 1; SEQ ID No 27900; 1069pp; English.

EXX Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic CC polypeptides. The proteins and their associated DNA sequences are used in CC the treatment, prevention and diagnosis of medical conditions caused by PS cacnes is also involved in infections of bone, joints and the central CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. CC pustulosis system, however it is particularly involved in the inflammatory CC sample with a binding agent that binds co the proteins of the invention CC and determining the amount of bound protein in the sample. The cC polypeptides may be used as antigens in a patient comprises contacting the CC specific for P. acnes proteins. These antibodies can be used to compregulate expression and activity of P. acnes polypeptides and CC diagnostic agents for determining P. acnes presence, for example, by CC enzyme linked immunosorbent assay (ELEA).

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO cat fire the protein and accordinate and concerns and accordinate directly from WIPO at the protein of the printed specific for the protein and accordinate accordinates. Score 7; DB 22; Length 159;

CC P. accordination accordinates and accordinate directly from WIPO cat form accordinate accordinate accordinate accordinate accordinate accordinate accordinate acco

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cc polypeptides. The proteins and their associated DNA sequences are used in cc the treatment, prevention and diagnosis of medical conditions caused by cc P: acnes. The disorders include SAPHO syndrome (synovitis, acne, cc pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. CC P. acnes is also involved in infections of bone, joints and the central converse and the central cc presence or absence of P. acnes in a patient comprises contacting a cc sample with a binding agent that binds to the proteins of the invention cc sample with a binding agent that binds to the proteins of the invention cc and determining the amount of bound protein in the sample. The cc polypeptides may be used as antigens in the production of antibodies co downregulate expression and activity of P. acnes polypeptides and ct therefore treat P. acnes infections. These antibodies can be used as consigent agents for determining P. acnes polypeptides and ct therefore treat P. acnes infections. The antibodies may also be used as consyme linked immunosorbent assay (ELISA).

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO cr at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or performed may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprisione of 5483 sentences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for

AAZ54575 to AAZ54576 and AAZ54616 to AAZ55457 represent pCR primers used in the exemplification of the present invention. The polypeptides, the polymucleotides, antibodis and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polymucleotides of the invention may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Petersen

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABLIG11), expressed DNA sequences (ABLIG176-ABLIG1); sepressed DNA sequences (ABLIG176-ABLIG1).
LEC1 polypeptide is encoded by the leafy cotyledon-1 (LEC1) gene (see ANG1022-24) of Arabidopsis thaliana. Full-length LEC1 polypeptide can act as a subunit of a protein capable of acting as a transcription factor in plant cells. The LEC1 gene is embryo-specific and can be used to modulate development (claimed) of embryos or other organs in plants. Inhibiting expression can be useful e.g. in weed control (by transferring an inhibitory sequence
                                                                                                                                       New isolated plant leafy cotyledon-1 gene - used for, e.g. increasing storage protein content in producing fruit with small and non-viable seed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

                       C LECI genes are thought to play a central role in late embryogenesis, in Specifying cotyledon identity during embryo development. LECI polypeptides may act as transcription factors. LECI polypucleotides are useful for modulating seed development and for inducing ecotopic development of embryonic tissue in a plant. In both cases, the LECI polynucleotide is introduced into the plant through a sexual cross and constructed is co-expressed in an antisense orientation with a second heterologous constructed from AP2 and RAP2 genes of Arabidopsis. The LECI polynucleotide selected from AP2 and RAP2 genes of Arabidopsis. The construction of the proparing expression cassettes for suppression in a seed, condition of the proparing expression, which is useful in weed control or for improving nutritional value of plant tissue respectively. LECI polypeptides and polynucleotides are especially used for increasing or analysis of the plant tissue respectively. LECI also accepted the plant tissue respectively.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
CC sequence that encodes LEC-1 protein comprising a subsequence that to LEC-1 B domain. LEC-1 sequences are used for modulating transcription resulting in the induction of embryonic characteristics core seed development in a plant. Polynuclectide sequences from LEC1 CC genes are used to direct expression of desired heterologous genes in cembryos, to modulate the development of embryos or the characteristics of an embryo on other organs (e.g., by embancing expression of the gene is cused to manipulate a number of useful traits, such as increasing or certain content in cotyledons or leaves. Inhibition of LEC1 gene expression is useful in weed control or teaves. Inhibition cof LEC1 gene expression is useful in weed control or to produce fruit with small and non-viable seed. Enhanced expression of LEC1 genes is cuseful to increase storage protein content in plant tissues. The LEC-1 gene promoters are useful for directing gene expression so that the casting desired gene product is located in embryos or seeds. Expression of LEC-1 genes in plant reproductive or vegetative tissue induce eccopic expression of cells and tissues, together with another plant nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins (ABB57037-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from vat ftp.wipo.int/pub/published_pct_sequences.
                                                                                Sequence
                                                                                                                                                                                                                                              Disclosure; SEQ ID NO
